DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31 are drawn to a method of predicting the risk of a disease via the isolation and quantification of mucin in a saliva sample, classified in class 436, subclass 7.1.
- II. Claims 32-60 are drawn to a method of reducing risk of a disease via mucin detection and the administration of a therapeutic reagent to a subject further employing oral fluid standards, classified in class 424, subclass 93.1.
- III. Claims 61-71 are drawn to a diagnostic kit for detecting a disease, classified in class 422, subclass 61.
- 2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP \S 806.04, MPEP \S 808.01). In the instant case each of the Groups are patentably distinct because they are directed to different methods having different functions (group I – predicts the risk of a disease and group II – reduces the risk of a disease).

Specifically the invention of Group I is directed to a method which merely detects a component in isolated mucin as a measure of predicting a disease. While Group II is drawn to therapeutic administration of a reagent wherein a component of mucin is correlated with oral fluid standard thereby reducing the risk of a disease.

Application/Control Number: 09/929,293

Art Unit: 1641

Further, the methods have different method steps and utilized diverse reagents. Group I does not require therapeutic administration or oral standards. Accordingly restriction is proper.

Inventions Group III and (Group I – Group II) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the kit/product of invention Group III can be practiced with either of the materially different processes of Group I or Group II.

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for Groups I, II, or III are not coextensive, restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and do not represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches.
- 5. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Application/Control Number: 09/929,293 Page 4

Art Unit: 1641

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

- 7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventor ship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventor ship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
- 8. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 Fax number is (703) 308-4242, which is able to receive transmissions 24 hours/day, 7 days/week.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lisa V. Cook whose telephone number is (703) 305-0808. The examiner can normally be reached on Monday-Friday from 8:00 AM - 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le, can be reached on (703) 305-3399.

Application/Control Number: 09/929,293

Art Unit: 1641

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
